

1. What is append()?

Answer:

- Adds one element.
 - Adds the element at the end of the list.
 - Changes the original list.
-

2. What is insert()?

Answer:

- Inserts an element at a specific position.
 - Requires index and value.
-

3. What is remove()?

Answer:

- Removes an element by value.
 - Removes the first matching value.
 - Shows an error if the value is not found.
-

4. What is pop()?

Answer:

- Removes an element by index.
 - Returns the removed value.
 - By default, removes the last element.
-

5. What is the difference between append() and extend()?

Answer:

- `append()` adds one item.
- `extend()` adds multiple items.
- `extend()` takes another list or iterable.
